

DELIVERY SIGN-OFF

FACT SHEET

With the advent of Web-based ordering and integrated supply chains, the proof of delivery has become a key to managing high volumes of deliveries efficiently.

Benefits

- Reduced paperwork
- Streamlined workflow
- Data instantly available
- Easier invoice matching
- Reduces errors on both sides of the supply chain
- Integrated to MYOB EXO and can be configured to use either invoices or sales orders
- Low cost solution

The delivery driver simply selects the customer and then the sales order (or invoices) from the list, and obtains the signature of the recipient on the Android device. The signature is then saved and available to be attached to the delivery note (or alternate document) as a permanent record of proof of delivery. The signature is linked into the document manager of MYOB EXO.

Other Blue Echidna Modules

- Goods Received
- Picking
