Improve warehouse efficiencies and eliminate picking errors with the Blue Echidna – Picking application

What is it?

Blue Echidna – Picking is a locally developed Android-based mobile application that can revolutionise the picking process in your warehouse.
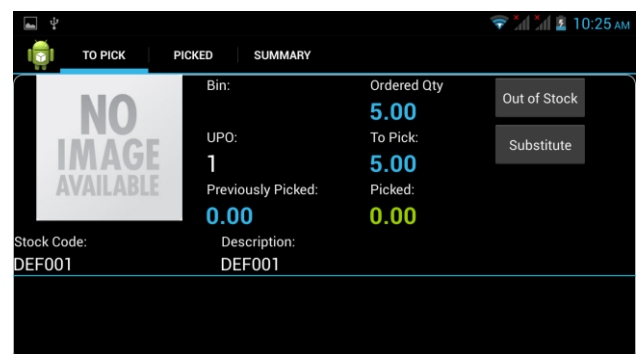

Blue Echidna's main aim is to use cutting edge technology to improve warehouse efficiencies. The software provides a value proposition that speaks for itself. It is low risk, immediate, and sustainable. Our case studies have shown a reduction of 25% in picking staff, and a reduction in picking errors to almost zero.

Modern technology and the advent of Android devices have dramatically reduced the cost of scan picking systems. These systems are now affordable to companies with as few as two pickers in their warehouse.

The android device replaces the traditional rugged scanners generally used in a warehouse. A Bluetooth barcode scanner is used in conjunction with a standard Android device. This means a much lower cost for hardware and warehouse networks.

What can it do?

Blue Echidna – Picking delivers huge improvements in efficiency. Not only are picking errors eliminated, but warehouse employees can be directed along the most economic route in the warehouse during their pick cycles. Pickers will be notified of quantities and stock locations. An image of the product is shown, which further reduces errors. All barcode scans are validated with sound notifications. A different sound alert is activated for correct or incorrect product scans.

Blue Echidna – Picking integrates tightly with MYOB EXO and supports the following functionality:

- Kits
- Linked Stock Codes
- Serial numbers
- Batch Codes
- Correct EXO Object lock functionality
- Checking against physical stock
- Whole orders or part supply orders

Further Advantages

- Lower cost than conventional scan and pick systems
- Through the use of web services the API allows for real-time integration between EXO and the Android devices over WIFI or 3/4G.
- Proven track record and reference sites
- Cutting edge technology

Which industries are most suitable?

- Stock based companies using MYOB EXO where picking solutions are required in high volume environments.
- Companies tracking serial numbers and / or batch codes
- Companies using a B2B Customer Web-portal. Orders flow through from your customer to the warehouse instantly, and are available for picking with Blue Echidna.

Other Blue Echidna Modules

- Goods Receipted
- Picking
- Stocktake
- Stock Management
- Delivery Sign-Off
- Works Orders

- Jobs
- Multi Bin
